

Pesticide Free Non-Toxic

Honey Bee Magnet

Attracts Honey Bees to increase fruit set and yields of:

- Fruit trees
- Berries
- Vegetables

History- The research on honey bee attractants has been underway for the past forty years. From this research was developed Queen pheromones to attract swarms, alarm pheromones to warn bees of danger, and general attractant pheromones to direct worker field bees to sources of water and food.

Honey Bee Magnet is a blend of selected pheromones identified by researchers to attract worker bees to potential food sources (flowers). These are natural attractants often found in fruit and vegetable flowers and are non-toxic. Other products have been developed that must be sprayed on the crop more than once.

Honey Bee Magnet Simply hang one lure/large fruit tree or 1/200 sq.ft. in garden at the start of bloom. Attraction will last for 2 weeks.

Honey Bee Magnet has the following advantages over liquid products:

- No messy sprays or cleanup
- Do not need to reapply if bloom lasts 2 weeks or less
- No worry about reapplication if it rains 1-3 days after spraying
- No concern about getting spray in eyes, on skin, or ingested
