### Using the Natural Catch® Fruit Fly Trap

1) Write today's date on the label and pierce the top of the Natural Catch® with the enclosed stick. Incorporate the Natural Catch® Fruit Fly Trap in displays of onions, bananas or tomatoes and wherever fruit flies may be a problem. The Natural Catch® has convenience built-in; it is complete and ready to use.

2) Place the Natural Catch® Fruit Fly Traps 3 - 4 feet apart through the display area. The environmentally safe attractant is pre-measured which produces predictable results. Typically, fruit fly populations are reduced 70 - 80% and more.

3) Inspect the trap entrance and keep free of debris. The trap has been designed to be long-lasting, very low maintenance, and simple. Replace after 30 days.

4) The Natural Catch® Fruit Fly Traps are safe for use around food. The container is FDA approved food grade material and is recyclable. The attractant is safe, completely non-toxic and pesticide-free. The trap design prevents spillage in most orientations.
