

ORGANIC QUICKROOT

Description: This organic product is intended for use in starting flats and containers, soil blockers and small pots (up to 3" diameter). Organic Quickroot Soilless Germination Mix is not appropriate as a long-term potting soil in larger containers.

Directions: First, thoroughly wet the mix in a bucket or wheelbarrow, prior to placing it in the plantstarting container. This will take quite a bit of water, as the mix is absorbent. Next, fill the container and firm down the germination mix so no large air gaps are present.

After the seedlings develop true leaves, Organic Quickroot Soilless Germination Mix should be supplemented 2-3 times a week with regular feedings of hydrolyzed liquid fish or fish powder, combined with a kelp product, such as hydrolyzed liquid kelp or Maxicrop.

Note: Fish and kelp products can leave a film on the surface of the germination mix, impeding water penetration. To prevent this from happening, just water the plants with plain water immediately after fertilizing.

2 Gal.
(7.57 L)

Ingredients: Coir Fiber, Vermiculite, Green Waste Compost, Fish Bone Meal, Oystershell lime (pH adjuster), Kelp Meal, and Wetting Agent.

What makes Quickroot organic?

All of the ingredients in this premium Organic Quickroot Soilless Germination Mix are approved for use in organic agriculture.

As a home gardener, you can rest assured that you are purchasing the highest quality, organic soil less germination mix for your plants, keeping synthetic fertilizers, sewage sludge, and cheap fillers out of your home and garden.

Contents: 2 Gallons (7.57 liters)
