

Currants

Planting & Growing Guide

Questions? Contact us at (888) 784-1722 or helpdesk@groworganic.com

CULTURAL REQUIREMENTS

Currants are easy to grow and can tolerate a wide range of soils. Soil must be well-drained and relatively free of salts. Keep soil constantly moist but do not allow it to become too soggy.

Currants are long-lived plants and very winter hardy but do not like hot summers. If your summer temperatures are in excess of 90°F, plant on the north side of your house or building. Planting on the north side will also protect your currants from a late spring frost, by delaying bloom time. You can also plant in areas that get afternoon shade.

HEELING IN

When your bare root plants arrive, open the plastic bags immediately. It is best to plant right away, within a week of delivery, however if you cannot plant right away, you may "heel in" the plants to protect them and keep them alive (but still dormant) until you are able to plant them in their permanent spot.

Outdoors: To heel in bare root plants outside, pick a location that is shielded from wind. Dig a trench about twice as deep as the roots are long, with one side of the trench sloping at a 45° angle. Place in the hole roots side down, so that the plant is supported by the sloping side. Cover the roots with soil or sand and gently tamp down to avoid air pockets. Periodically check the root area, keeping the soil moist.

Important Information

- **If your plants arrived damaged**, take photographs and contact us immediately and we will provide you with a refund of the purchase price, or a replacement.
- **You should plant your currants within a week of delivery.** If you are unable to do so, you can plant it in a pot or "heel in" your currants until you are able to plant.

Indoors: To heel in bare root plants indoors, whether due to snow or a frozen ground, choose a cool place like a root cellar, basement, or garage. It's important to choose a place where the temperature stays between 38°F and 45°F. This is important so the roots neither freeze, nor does the plant break dormancy. Place the roots in a container with soil or sand and be sure to keep the root area moist.

FERTILITY

Currants love soil that is high in organic matter. If you have conducted a soil analysis, up to 5% organic matter is ideal. If you have low organic matter, add high-quality compost. Once the currants are planted, mulch the watering zone with several inches of compost each year. Add a well-balanced organic fertilizer in the Spring if your soil lacks nutrients. Do not over-apply nitrogen as this will cause excess vegetative growth and make the plant susceptible to mildew and insects. Never apply nitrogen after fruit has set.

PLANTING & GROWING

Currants can be planted in rows or trained as a simple espalier. If you choose to grow these as bushes, plant shorter cultivars, at least 3 feet apart in a row or 3 feet apart from neighboring plants. Plant further apart if you have selected larger cultivars. Space multiple rows 7 or more feet apart.

Set plants at least an inch deeper than they were grown in the nursery. Shallow plants are prone to drying out so err on the deep side. At planting time, cut young single-stemmed plants down to three or four buds, but no more. If your plant has more than one stem, cut off all but the healthiest looking one. The above ground portion of the plant must be balanced with the root system or the plant will suffer. Drip irrigation works best as it keeps the water off of the leaves and fruit.

HARVEST

Currants are ready to harvest in early to mid-summer, late June to mid July, for many cultivars in most of North America. For fresh consumption, allow berries to fully ripen on the plant.

Return Policy

Perishable Items (3-Day Return Policy)

We guarantee the perishable items we sell to be in good, viable condition when we sell them. Perishable items include, but are not limited to, garlic bulbs, flower bulbs, seed potatoes, onion sets & transplants, bare-root trees, vegetable crowns... etc. If your perishable item arrives in substandard condition, please contact us within 3 days of the purchase date (or delivery date) and we will provide you with a refund of the purchase price (including shipping costs), or a replacement. Accordingly, we urge you to open any boxes marked as "Perishable" immediately upon receiving them. Because some perishable items can deteriorate very quickly, we cannot accept any claims beyond the 3-day time frame as it becomes too difficult to determine if these items were delivered in substandard condition, or if they turned into such substandard condition because of having been improperly cared for or stored once delivered.

Limited Product Guarantee

Limitation of Remedy

We warrant to the extent of the purchase price only that the seeds or plants sold hereunder are as described on the label within recognized tolerances. No other warranty is given, expressed or implied, of (1) the merchantability or fitness of the seeds or plants for any particular purpose, or (2) against loss due to any cause. We cannot accept any responsibility for the many uncontrollable growing and climatic conditions (soil preparation, fertilization, weed and pest control, temperature control, irrigation...etc.) that must be met to insure the success of your crop(s) or plants.
