PREVENT SCALE FROM FORMING IN
IRRIGATION SYSTEMS

- Have the water analyzed properly
- Maintain the water pH at 6.5 or lower
- Make sure pH is adjusted properly BEFORE adding gypsum or products that contain calcium
- When adding phosphorous fertilizer, be sure to use an acid form of fertilizer
- Use scale preventative products as needed

Information regarding the contents and levels of metals in this product is available on the Internet at: <http://www.aapfco.org/metals.htm>
