

MIXING DIRECTIONS

Shake container well or stir contents thoroughly before mixing. Mix 1 gallon AG+ to 99 gallons water or 1 gallon AG+ to 50 gallons water (if infestation exists). After mixing concentrate, agitate again before spraying to prevent settling.

APPLICATION DIRECTIONS

TIMING: Apply as a preventative treatment prior to insect infestation. Make the first application at foliar emergence and repeat on a 10-14 day spray schedule to maintain the repellency effect.

DO NOT apply just prior to or during pollination as Garlic Barrier repels bees and, therefore, adversely affects pollination.

METHOD OF APPLICATION: Garlic Barrier may be applied by air or ground equipment.

RATE OF APPLICATION: Set equipment to thoroughly wet foliage. Spray over 10 acres at rate of 10 gallons per acre for 1:99 mixture. Spray at rate of 5 gallons per acre for 1:50 mixture. If spraying orchards (trees), use any amount water but 25.5 ounces of AG+ mixed in water. Garlic Barrier is compatible with most surfactants and conventional pesticides. The most effective ambient temperature range for application is 60 to 85 degrees F.

AFTER TASTE: AG+ will impart no garlic taste to food crops.

STORAGE AND DISPOSAL

STORAGE: The optimum storage temperature is between 35 and 90 degrees F to prevent product degradation. Do not freeze. Do not store in direct sunlight. Do not use or store near heat, open flame or hot surfaces.

DISPOSAL: Rinse bottle and present for recycling.
